Education

Sri Venkateswara College of Engineering (SVCE) 2023 – 2027
B.E. in Computer Science and Engineering **CGPA: 9.09 / 10.0**

- **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, System Design, OOP

Experience

Summer Intern – SVT/PV Routing IP, Ciena Jun 2026 – Aug 2026
Gurugram, Haryana

- Developed an internal network device management tool across Ciena Service Delivery Switches, reducing manual deployment and verification time by **40%** while eliminating manual errors on multi-node topologies.
- Developed autonomous AI agents using **Google Agent Development Kit (ADK)** to automate telemetry extraction, log triage, and device state verification workflows.
- Partnered with P3 engineers and cross-functional teams to design, deploy, and validate multi-switch network topologies (IS-IS, OSPF, DHCP); triaged and resolved **10+** critical hardware/software defect tickets using Jira.
- Collaborated with globally distributed engineering teams (Ottawa and India) to troubleshoot failure scenarios, physical device configurations and validate software fixes on networking infrastructure.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, SQL (PostgreSQL), Java, C/C++
- **Frontend & UI:** React.js, React Native, Tailwind CSS, Zustand
- **Backend & Systems:** Node.js, Express.js, RESTful APIs, Apache Kafka , Microservices Architecture, Zod, Redis
- **Databases & Cloud:** PostgreSQL, MongoDB, MySQL, AWS (S3)
- **DevOps & Infrastructure:** Docker , Kubernetes, GitHub Actions (CI/CD), Nginx (Reverse Proxy), Linux, Git
- **AI & Testing:** Google ADK (AI Agents), Generative AI, ML Anomaly Detection, MCP, Vitest, Supertest

Projects

Distributed Microservices Platform TypeScript, Node.js, Express, PostgreSQL, Apache Kafka, Docker

- Built a modular microservices platform with an edge API Gateway handling request routing, rate limiting, and centralized Role-Based Access Control (RBAC).
- Implemented asynchronous event streaming with Apache Kafka for background task auditing and automated PostgreSQL migrations, backed by **380+** automated tests.

Cloud Infrastructure & Automated CI/CD Pipeline Docker, GitHub Actions, Nginx, Linux, OpenStack, Bash

- Engineered an automated CI/CD pipeline using GitHub Actions to run linting, type checks, and zero-downtime container deployments.
- Containerized production services using multi-stage Docker builds and deployed them behind an Nginx reverse proxy with automated health checks.

Soundwave – Full-Stack Audio Streaming Platform React 19, TypeScript, Node.js, Express, MongoDB, Web Audio API

- Developed a full-stack media streaming web application with custom audio equalization, dynamic volume normalization, and real-time canvas visualizers.
- Built a synchronized karaoke lyrics engine with sub-millisecond playhead tracking, optimizing the audio event loop to reduce unnecessary React re-renders by **90%**.

Research

AI Significance in Cloud Security: Adaptive Threat Detection 2024

- Researched machine learning anomaly detection models (Random Forest, Isolation Forest) for cloud security threat analysis; presented findings on adaptive risk mitigation and behavioral profiling across distributed cloud infrastructure.

Achievements & Highlights

- **Competitive Programming:** Solved **400+** Data Structures and Algorithms problems across LeetCode and NeetCode.
- **Production Engineering:** Built and deployed full-stack systems, event-driven microservices, AI agents, strict test coverage, and automated deployment pipelines.
